APPLICABLE STANDARDS

DIRECTIVE 2014/34/EU	EN/IEC 60079-7
EN/IEC 60079-0	EN/IEC 60079-31
EN/IEC 60079-1	EN/IEC 60529

OPERATING TEMPERATURES

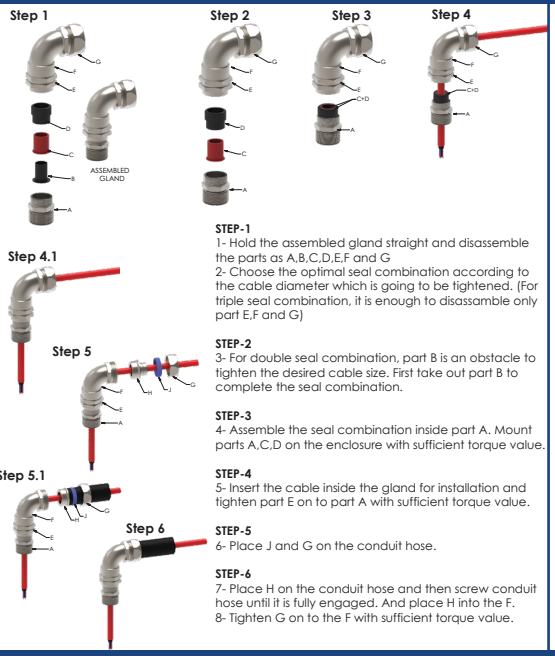
for Ex db, Ex eb, Ex tb execution,
supplied with Silicon sealing rings, O-rings or washers: Ta-60°C +80°C
supplied with Chloroprene sealing rings, O-rings or washers: Ta -40°C +80°C
for Ex eb, Ex tb execution,
supplied with Silicon sealing rings, O-rings or washers: Ta-60°C +140°C
supplied with Chloroprene sealing rings, O-rings or washers: Ta -40°C +80°C

2 SAFETY INSTRUCTION

-Qualified personnel in compliance with the nation laws shall carry out the maintanence in accordance with EN/IEC 60079-17 and installation in accordance with EN/IEC 60079-14.
-Changes to products are not allowed.
-Only Bimed spare parts must be used.
-Everyday and extraordinary maintenance operations must be carried out only by qualified personnel after approval from expert technicians.
-The maintenance operations must be carried out only after the engine has been cut off from mains or from the related electrical appliance.
-The following instructions must be strictly followed in order to get a correct installation.
-The national safety rules and accident prevention regulations, must be strictly respected.
-In case of ambient temperature is below -30°C, austenitic steels must be used according to EN10213-3 (Brass or Stainless steel AISI 316).
-The clamping of the cables must be realised outside of enclosure by appropriate toque values to guarantee the mechanical characteristics.
-The cable glands can be used with Ex i circuits.
-The cable glands are only suitable for fixed installations. Cables shall be effectively clamped to prevent pulling or twisting.
-The cable gland installation shall be done according to safety manufacturer instructions to maintain degree of protection.
-Cable gland installation shall be done taking into account the temperature range declared for cable glands in relation to protection mode execution, versus the ambient temperature proper of installation.
-When cable glands are installed with polyamide insert BDPX..., mechanical risk have to taken into account, depending on cable gland and insert tap. The upper operating temperature is limited to 70oC. When insert tap is removed in order to install to proper cable, the integrity of sealing rings have to be checked, in order to guarentee the correct tightness. If necessary, sealing rings have to be replaced with new ones. Precautions shall be taken in order to guarentee protection against risk of mechanical demage is provided, when insert taps are suitable for low mechanical risk (4J) only.
-Cable glands for non-circular cables shall be fitted with proper cables, suitable for sealing ring, according to manufacturer's instruction.
-The certificate does not indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed in the first page of the manuel.
-The certificate does not cover hazards coming from environmental conditions different from those clearly and precisely indicated in clause 1 of EN 60079-0.
-Flat washer material should be same material with the inner sealing of the gland.Service temperature of the gland is related to the material of the sealing ring but can additionally be limited by the material of the flat washer/oring/accessories.

Rev. 0

3 Mounting Instruction EBLN & EBLQ



STEP-1
1- Hold the assembled gland straight and disassemble the parts as A,B,C,D,E,F and G
2- Choose the optimal seal combination according to the cable diameter which is going to be tightened. (For triple seal combination, it is enough to disassamble only part E,F and G)

STEP-2
3- For double seal combination, part B is an obstacle to tighten the desired cable size. First take out part B to complete the seal combination.

STEP-3
4- Assemble the seal combination inside part A. Mount parts A,C,D on the enclosure with sufficient torque value.

STEP-4
5- Insert the cable inside the gland for installation and tighten part E on to part A with sufficient torque value.

STEP-5
6- Place J and G on the conduit hose.

STEP-6
7- Place H on the conduit hose and then screw conduit hose until it is fully engaged. And place H into the F.
8- Tighten G on to the F with sufficient torque value.

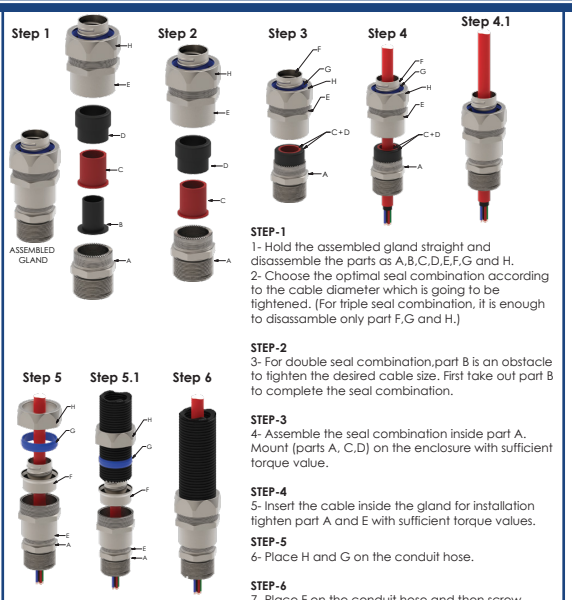
5 Mounting Instruction EBLS



STEP-1
1- Hold the assembled gland straight and disassemble the parts as A,B,C,D,E,F,G and H.
2- Choose the optimal seal combination according to the cable diameter which is going to be tightened. (For triple seal combination, it is enough to disassamble only part F,G and H.)

STEP-2
3- For double seal combination,part B is an obstacle to tighten the desired cable size. First take out part B to complete the seal combination.

STEP-3
4- Assemble the seal combination inside part A. Mount (parts A, C,D) on the enclosure with sufficient torque value.

STEP-4
5- Insert the cable inside the gland for installation tighten part A and E with sufficient torque values.

STEP-5
6- Place H and G on the conduit hose.

STEP-6
7- Place F on the conduit hose and then screw conduit hose until it is fully engaged. Place F into the E.
8-Tighten H on to the E with sufficient torque value.

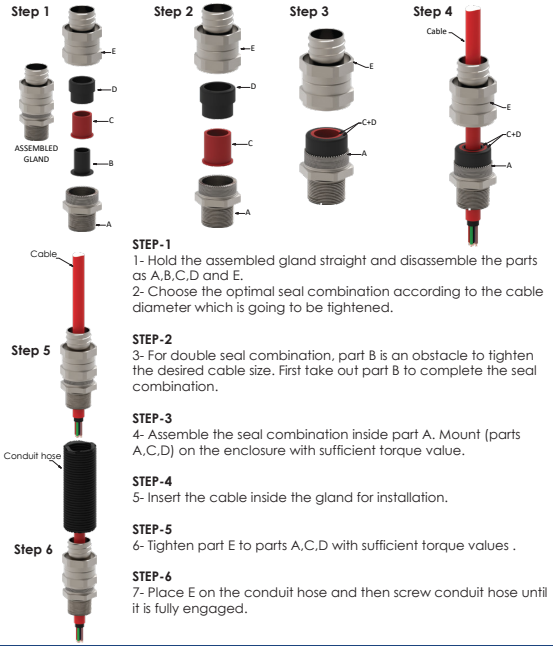
7 Mounting Instruction EBMC



STEP-1
1- Hold the assembled gland straight and disassemble the parts as A,B,C,D and E.
2- Choose the optimal seal combination according to the cable diameter which is going to be tightened.

STEP-2
3- For double seal combination, part B is an obstacle to tighten the desired cable size. First take out part B to complete the seal combination.

STEP-3
4- Assemble the seal combination inside part A. Mount (parts A,C,D) on the enclosure with sufficient torque value.

STEP-4
5- Insert the cable inside the gland for installation.

STEP-5
6- Tighten part E to parts A,C,D with sufficient torque values .

STEP-6
7- Place E on the conduit hose and then screw conduit hose until it is fully engaged.

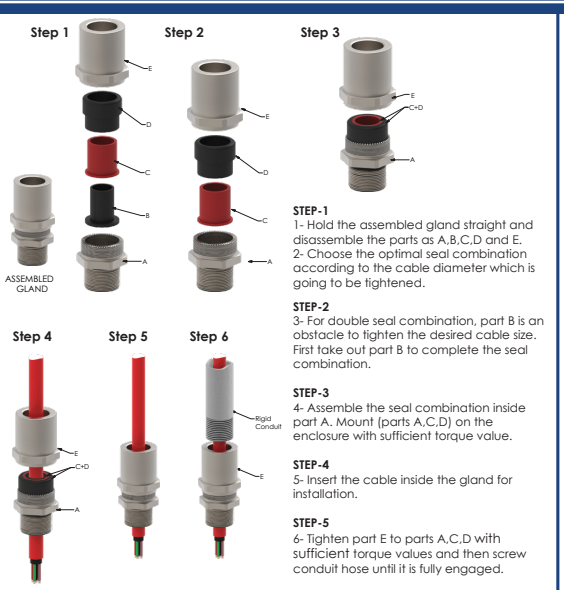
9 Mounting Instruction EBM



STEP-1
1- Hold the assembled gland straight and disassemble the parts as A,B,C,D and E.
2- Choose the optimal seal combination according to the cable diameter which is going to be tightened.

STEP-2
3- For double seal combination, part B is an obstacle to tighten the desired cable size. First take out part B to complete the seal combination.

STEP-3
4- Assemble the seal combination inside part A. Mount (parts A,C,D) on the enclosure with sufficient torque value.

STEP-4
5- Insert the cable inside the gland for installation.

STEP-5
6- Tighten part E to parts A,C,D with sufficient torque values and then screw conduit hose until it is fully engaged.

STEP-6
7- Place the rigid conduit on the E and then screw the rigid conduit until it is fully engaged.

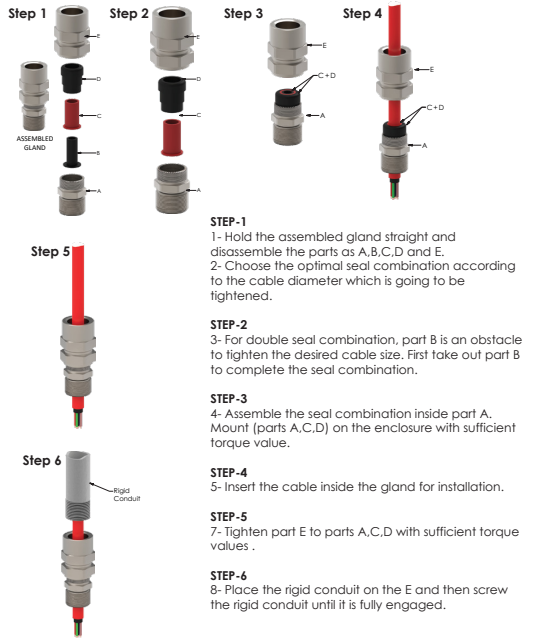
11 Mounting Instruction EBMS



STEP-1
1- Hold the assembled gland straight and disassemble the parts as A,B,C,D and E.
2- Choose the optimal seal combination according to the cable diameter which is going to be tightened.

STEP-2
3- For double seal combination, part B is an obstacle to tighten the desired cable size. First take out part B to complete the seal combination.

STEP-3
4- Assemble the seal combination inside part A. Mount (parts A,C,D) on the enclosure with sufficient torque value.

STEP-4
5- Insert the cable inside the gland for installation.

STEP-5
7- Tighten part E to parts A,C,D with sufficient torque values .

STEP-6
8- Place the rigid conduit on the E and then screw the rigid conduit until it is fully engaged.

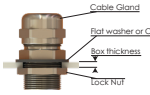
M90x1.5	90,0-90,3	G 4"	113,1-113,4		
M100x1.5	100,0-100,3	G 5"	138,5-138,8		
M110x1.5	110,0-110,3				
M115x2.0	115,0-115,3				
M130x2.0	130,0-130,3				

Recommended Hole Diameters For Non Threaded enclosure applications in relation with the used thread types are shown above.

For non-threaded enclosures it is recommended to use flat washer,between the gland body and enclosure. The recommended wall thickness is 1,5 mm for non threaded enclosures. For non-threaded enclosures, in case of enclosure wall thickness is equal or lower than 1,5 mm. Bimed flat washer should be used. O-ring can stay in the channel if it is necessary. During the assembly it is recommended to rotate the locknut. If the assembly needs to be done by rotating the gland, then o-ring should be preferred.

Ingress Protection: In order to guarantee the specified IP66/68 rating, sealant agent shall be applied on at least two full threads before fitting the gland to the box. In any case you must pay attention to guarantee the metallic continuity. For threaded enclosures min. wall thickness must be equal to the thickness of the relevant locknut.

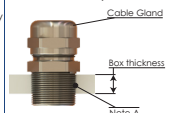
IP Protection for Cylindrical Threaded Joints



Ex d Execution:
-Assemble the gland with o-ring or flat washer through the threaded hole.
-The wall has to be thick enough to engage at least 5 full threads.
-The minimum engaged thread depth must be at least 8 mm.

Ex e & Ex tb Execution:
-Assemble the gland with o-ring or flat washer through the threaded hole.
-You have to respect the minimum wall thickness of 1,5 mm.

IP Protection for Tapered Threaded Joints



NPT	Minimum Engaged Thread Depth mm	inch
1/4	7,055	0,277
3/8	7,055	0,277
1/2	9,070	0,357
3/4	9,070	0,357
1	11,045	0,434
1 1/4	11,045	0,434
1 1/2	11,045	0,434
2	11,045	0,434
2 1/2	15,875	0,625
3	15,875	0,625
4	15,875	0,625
5	15,875	0,625
